PROFESSIONAL SUMMARY

Fullstack and Android developer (Informatics undergraduate, President University) who ships end-to-end products: a real-time YOLO11 computer-vision pest-detection platform built for an enterprise logistics challenge, and a Kotlin Android app backed by 51 automated tests with CI. Strong across React/Next.js, FastAPI, and PostgreSQL, with working knowledge of AI integration (Gemini, RAG), security (OCTAVE Allegro, vulnerability assessment), and test-driven quality practices.

TECHNICAL SKILLS

Languages: Python, Java, Kotlin, TypeScript, JavaScript, Dart, SQL

Web & Mobile: React, Next.js, Node.js, FastAPI, Android (Kotlin, MVVM, Room), Flutter

AI / ML: YOLO11/YOLOv8, OpenCV, Google Gemini, LLMs, RAG, Prompt Engineering

Testing & DevOps: JUnit 4, MockK, Turbine, Vitest, GitHub Actions CI, Docker, Git, Linux

Data & Security: PostgreSQL, MySQL, MongoDB, Prisma, SQLite; SIEM/IDS, Penetration Testing, OCTAVE Allegro

KEY PROJECTS

PestGuard AI — Real-Time Warehouse Pest Detection Platform

pestguard-ai.vercel.app

- Built a 24/7 computer-vision system (YOLO11-Nano, ~5.2 MB, CLAHE low-light preprocessing) detecting pests across 4 camera zones with sub-second alerts via WebSocket, browser audio, and Telegram — PT Kawan Lama Group AI Open Innovation Challenge 2026.
- Added a Gemini 2.0 Flash RAG assistant, role-based access, and PDF/CSV reporting; quantified an estimated Rp 144–324 million in annual savings per warehouse. Tech: Python, FastAPI, React, OpenCV, Docker.

MiniBookLibrary — Offline-First Android App (51 Automated Tests)

github.com/SultanZhalifa

- Developed a Kotlin book-management app (MVVM, Room, Coroutines, Flow) with ISBN auto-fill via Google Books API, PDF/JSON export, and salted SHA-256 authentication.
- Wrote 51 unit tests (JUnit 4, MockK, Turbine) covering auth, CRUD, ViewModel state, and API parsing — run on every push via GitHub Actions CI.

DevLog — Developer Progress Tracking Platform

devlog-sultanzhalifa.vercel.app

- Shipped a fullstack platform with GitHub-style streak heatmap, analytics dashboard, public profiles, and discovery feed; GitHub OAuth and unit-tested streak logic. Tech: Next.js 16, TypeScript, Prisma, PostgreSQL (Supabase), Vitest.

SRMAudit — Security Risk Management Platform (OCTAVE Allegro)

github.com/SultanZhalifa

- Built a GRC web app with OWASP/ISO/NIST mapping, risk-scoring engines, RBAC, and PDF reporting; runs on Supabase (RLS) or fully offline via IndexedDB. Tech: TypeScript (strict), Vite, Vitest, GitHub Actions CI.

AstraPay Naik Kelas — Explainable Credit-Scoring Engine

github.com/SultanZhalifa

- Created a deterministic credit-scoring engine converting 90 days of QRIS transaction history into tiered micro-loans, backed by 41 unit and edge-case tests. Tech: Next.js 16, TypeScript, Vitest.

WORK EXPERIENCE

PT Honda Prospect Motor — Production Worker, Repair AF / Welding Division

Karawang | Apr 2023 – Apr 2024

- Performed daily quality-control checks on welded components, flagging rework outside OEM tolerance standards.

PT Indomobil Trada Nasional (Nissan–Datsun) — Industrial Internship (PRAKERIN)

Cikarang | Mar – May 2021

- Supported workshop inspection and service operations; earned a “Good” rating from the Workshop Head.

EDUCATION

President University — Bachelor of Informatics (5th Semester)

Cikarang | 2024 – 2027 (Expected)

Coursework: Algorithms, Data Structures, Databases, Software Engineering, Networks. Event Committee, HACKSPHERE 2025 national 48-hour hackathon.

CERTIFICATIONS

Google / Coursera (2026): Google Cybersecurity & Google IT Support Professional Certificates • **Google for Education (2026):** Gemini Certified (3 credentials) • **IBM SkillsBuild (2026):** Build an AI Agent, Designing AI Solutions, Intro to LLMs, Data Literacy • **Dicoding (2026):** C, Java, Haskell, SOLID Principles, Project Management • **RevoU:** Intro to Software Engineering (2026), Intro to Data Analytics (2024)
